Preparation:

Slowly add Integrity C940 into Di-Water with continuous mixing. Add the rest of Phase A ingredients one at a time. Start heating to 70-75°C.

In a separate container, mix Phase B ingredients, heat to 70-75°C, mix well until all solids are dissolved.

When both Phases are at 70-75°C, add Phase B into Phase A with continuous mixing, homogenize to form better emulsion.

Mix until uniform then start cooling to 40-45°C.

At 45°C, add Phase C ingredients one at a time. Mix well until uniform. Continue cooling to 25°C.
