

ParaButter™ Hemp Seed Butter

INCI: Cannabis Sativa Seed Oil
(and) Hydrogenated Vegetable Oil

ParaButter™ Hemp Seed Butter is produced from the oil of expeller pressed seeds of the hemp plant (*Cannabis sativa*). Hemp seed oil is valued for its use in cosmetics and toiletries due to its high content of essential fatty acids, which helps the action of the hydrolipidic coat, thereby reducing transepidermal water loss (TEWL). Hemp Seed Oil contains one of the highest polyunsaturated fatty acid (PUFA) contents of all the natural oils. It provides the four essential fatty acids beneficial to the skin: linoleic acid (LA, 18:2 ω 6), α (alpha)-linolenic acid (LNA, 18:3 ω 3), γ (gamma)-linolenic acid (GLA, 18:3 ω 6) and Stearidonic Acid (SDA). Hemp seed oil is one of the “driest” natural oils which is absorbed quickly into the skin; the butter produced from it also exhibits a relatively dry feel. It provides excellent lubricity without being greasy.

Specifications:

Color:	Yellow-Green
Odor:	Characteristic, Vegetable
Melting Point:	40-52
Iodine Value:	100-120
Saponification Value:	175-200

Shelf Life: 24 Months

Benefits:

- Anti-Inflammatory
- Anti-Oxidant
- Biodegradable
- Moisturizing
- Plant Derived/Vegetal Based
- Hydrating

Suggested Use:

- Body Care
- Soaps
- Facial Creams
- Lotions & Sunscreens
